DETAILED ACTION

Drawings

1. The drawings Fig. 5 is objected to under 37 CFR 1.83(a) because they fail to show the “selecting transistor, driving transistor, electroluminescent element” as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Response to Arguments

2. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2821

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-2 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen (USP. 6,946,689).

Regarding claim 1, Kimura disclose an electroluminescent display device in Fig. 1 and 3 comprising:

- a plurality of pixels (Col. 2, Line 42); a pixel selecting transistor (10); an electroluminescent (O10); a driving transistor (20) to drive a corresponding pixel selecting transistor (Col. 1, Line 44-52), the driving transistor comprising a channel of P type and a lightly-doped-drain type (Col. 4, Line 1).

Art Unit: 2821

Regarding claim 2, Chen disclose in Fig. 3 that the driving transistor further comprises a gate electrode (314), a P type impurity region (306, 308) and a region of no doped impurities (304') is disposed between the gate electrode and the P type impurity region (Fig. 3D).

Regarding claim 5, Chen disclose in Fig. 3 that a glass substrate (302) on which the pixel, the pixel selecting transistors, the electroluminescent elements and the driving transistors are disposed (Col. 4, Line 44).

Allowable Subject Matter

5. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Reasons for Allowance

6. Prior art of record fails to disclose or suggest the combination of the limitation as set forth in the claims 3 and 4: a high concentration region containing a P-type impurity with a concentration of 1×10^{20} /cc or more and being in contact with an electrode, and a low concentration region containing a P-type impurity with a concentration of 1×10^{18} /cc or less and disposed between the high concentration region and the channel of the P type.

Citation of relevant prior art

Nakanishi (USP. 6,933,671) disclose display system and electronic device.

Akimoto et al (USP. 6,950,081) disclose image display device.
